

# Enemy Pie

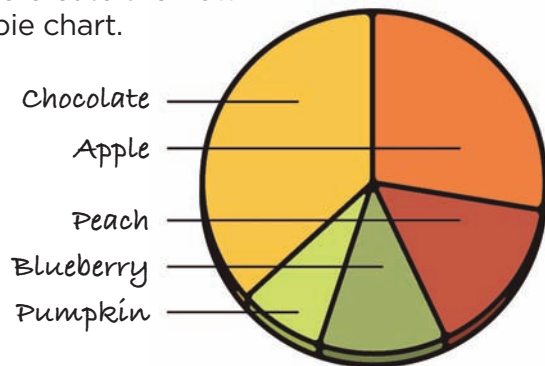

## RIF EXTENSION ACTIVITIES FOR EDUCATORS

### (ENEMY) PIE CHART

Explore fractions by making a class pie chart. Ask students what their favorite kind of pie (or dessert) is and put the answers on the board. Then, do the math to create a pie chart.

- ◆ Start with the number in the class. “There are 24 of us. We make that number the denominator and write it like this: /24.”
- ◆ Move on to favorites: “How many like strawberry pie? Six? Okay. That number is the numerator. So  $\frac{6}{24}$  or  $\frac{1}{4}$  of our class pie is strawberry.”

Students can also be put into small groups and asked to create their own group pie chart.

### FRIENDSHIP BOOK

Give every student a sheet of paper and ask them to draw a picture of or write a story about a favorite adventure with their best friend.

Put the stories into a notebook or bind them together with ribbon or yarn to make a class book.

### SECRET RECIPE

Show or give students examples of simple recipes for different kinds of pies. Put them in pairs or groups and have them work to create their own secret recipe for the most delicious pie ever. They can put whatever they want in the pie, but it should follow recipe format. Be sure they include fractions and imperatives!

(You could also do this as a whole-group activity.)

### GIVING THANKS

In the story, the boy's father helps him make a new friend. How have your students' parents helped them? Have your students write a letter to their parents (or another guardian/adult) thanking them for a time they helped their children do or learn something. Model how to write a friendly letter for the class.
