

Orcas are whales. They are not fish. They are mammals. They breathe air.

A group of orcas is a pod. An orca pod is a family.

Orcas are very smart. They talk to each other. They have names for each other. They help each other.

Orcas eat animals. They eat fish. They eat seals. They eat sharks. They eat other whales.

Orcas swim fast and far. They go hundreds of miles a day. They look for food. They work together. They help each other.

Orcas like to play. They jump. They spin in the air. They make a big splash.

Orcas play with their food. They grab seals. They toss them in the air. They toss them to each

other. They let the young orcas get the seals. Then they eat the seals. This is how young orcas learn to hunt.

Every pod has a leader. The leader is a female. She is at least 45 years old. Orcas live between 60–80 years. Some can live to be 100.

Orcas are whales. They are mammals, not fish. They breathe air.

Most orcas live in groups called pods. Pods are families. Orcas stay with their pods for most of their lives.

Each orca pod has one leader. This is usually an older female. She is at least 45 years old. Orcas live between 60 to 80 years. Some live to be 100.

Orcas are very smart. They talk to each other. They have names for each other. They work together. They help each other.
